COVER MEN PAST & PRESENT

Walter L. Elburn, born in East Neck Island, Maryland, 1872. Started farming at the age of 12 years, later became a greenhouse owner and has been operating and growing for the past 33 years at Chestertown, Md.

Julius Meyer, born in Madgeburg, Germany, 1876. Has been an American Grower for 51 years. Has worked for such famous establishments as Louis Dupuy, Anton Schultheis, Pankock & Shoemaker. Operates his own establishment at Maryland, Md.

John N. Hobson, born in Ireland, 1865. Began working in greenhouses at the age of fourteen. Worked on the private estate of Lord Monk, Governor General of Canada at the time, also worked for Lord Massey, Limerick, Ireland. Later for Logan Nurseries, Philadelphia, for 24 years. At the present is manager for Colonial Greenhouses, Linwood, N. J., where he has been for the past eighteen years.

Frederick J. Gerlach, born in Philadelphia, 1874, of German parents. Has worked almost his entire lifetime with Chas. L. Fischer, Atlantic City, N. J. In fact fifty years of greenhouse work with one employer, speaks well for both.

Perhaps you have wondered about our cover men. Why they were selected, and what they might represent. There was little doubt but they were Greenhouse Men, engaged in some form of greenhouse work, but who were they? Employee? Employer? or both? What might they represent? We have given you above a brief outline of the lives of these men. They are both Employer and Employee. Symbols of our Profession. These men and thousands like them have been the men responsible for building the foundation of the Flower Industry. These men have been responsible for spreading more cheer, the easing of much heart ache, making brighter many Christmas Times and many Easters. Hour upon hour of toil and labor, for which they never gave thought, nor expected any reward!

It is to these men, all men of our Profession, especially these men of the Old Guard that we dedicate as our Cover Men. They are Symbols of Our Profession, "The Growing of Flowers."

A facsimile of our current catalogue cover, with the year plainly marked, is attached to every package of seed, and is your guarantee that the seed therein is fresh from this year's crop.

BUSINESS TERMS

2%, 10 DAYS, 60 DAYS NET FOR CUSTOMERS OF APPROVED CREDIT

Prices in this catalog are subject to change without notice . . . All goods are offered subject to Crop Failures, Shortages or other causes beyond our control, and to being unsold on receipt of order . . . The prices in this catalog are for the trade only. For your own protection do not loan this catalog to anyone not entitled to Florists or Wholesale prices . . . Unknown correspondents desiring to open an account are requested to furnish three trade references with whom they have had credit relations . . .

Considerable progress has been made in reinstating some of the varieties of flower seeds that had been dropped during the war. Even as this catalog is printed, others are becoming available. Please inquire of anything you do not see listed — it may be in stock later.

We, Fred C. Gloeckner & Co., Inc., give no warranty, expressed or implied, as to the productiveness of any seeds, bulbs or plants we sell and we will not be in any way responsible for the crop. Our liability in all instances is limited to the purchase price.

In addition to seed, *Gloeckner* bulbs, plants and cuttings are selected with diligent care as to type, productiveness and freedom from disease so you may have the best upon which to build your prospective crops.

Outstanding Selections THAT DESERVE SPECIAL CONSIDERATION

Primula Malacoides "Springtime"

ANOTHER **Gloeckner** INTRODUCTION

Springtime is one of the finest *Malacoides* ever offered. The color is an attractive **salmon pink** which does not fade with age. The flower stems are strong and support a profusion of good sized blooms; and unlike many other varieties of *Malacoides*, the foliage has good texture and is fairly resistant to rot. Thus the outstanding features of this variety are its pleasing salmon pink color, compact habit of growth and excellent keeping quality.

Seed sown in June will make good flowering plants for January. September sown seed will produce good plants for early Spring, while later sowings can be grown into small plants usable in combinations.

TRADE PACKET \$2.00

Cineraria "Siter's Rainbow Strain"

(The Commercial *Cineraria*)

This new commercial *Cineraria* carries immense flower heads, is compact in growth, with small round leaves which require little room. These characteristics make it extremely profitable to grow. The medium large flowers in colors ranging from the bright eyed types, to the finer pastel shades, surpass anything previously introduced and are the outstanding feature of this strain. It is sure to please your most discriminating clientele and we are proud to offer this as a **Gloeckner** introduction.

ORIGINATOR'S PACKETS, \$2.00 EACH

Aster *Tilford Strain*

A selection of exceptionally wilt-resistant asters developed by Dr. Paul Tilford in cooperation with the Ohio Florists Association. As they have been flowered profitably in soil where ordinary Asters were 100% diseased, there is considerable interest in them for growing in the open.

DEEP ROSE—A crego originally, but selection has eliminated most of the crego characteristics and it is now near to the royal type. A medium size flower. Very wilt-resistant.

PURPLE—The royal purple developed until it is almost immune to wilt.

SHELL PINK—The Royal Shell pink. Resistance very high.

WHITE—A royal Aster showing over 80% resistance where the ordinary strains are 100% infected.

ORIGINATOR'S PACKET \$1.50 EACH

Petunia *Sunrise* (Windmiller)

A very compact and branching petunia. At maturity attaining a height of ten to twelve inches and a spread of fifteen to eighteen inches. At no time does the plant become "leggy". The two inch flowers have slightly frilled edges and are brilliant rose, with a flush of scarlet radiating from a small yellow throat. Excellent for bedding.

Cyclamen *Dauernheim Strain*

This strain is compact, free flowering and matures early. Tests have shown that it is more disease resistant and will do very well under conditions here in the States. The foliage is of medium size, the blooms well proportioned and particularly large, the white and white with eye often measuring six inches.

Dauernheim's have selected and improved this strain for a number of years and in their trials have found this strain to be superior.

Pure White	3.50	28.00
Salmon	3.50	28.00
White with Eye.....	3.50	28.00

Antirrhinum *Winter Snapdragons For Greenhouse Culture*

Early flowering varieties of *Antirrhinum* have been developed through constant breeding. They are not the largest flowering but are of medium size which have been in favor with the retailer. For Spring flowering the varieties producing larger spikes should be grown. Seed should be sown late in June or early July for Winter flowering. High temperature prohibits germination of the seed and one must, therefore, select a cool location for the seed flats.

Damping off is a serious problem and all precautions should be taken to avoid it. The soil should be sterilized with steam or other efficient measures, and after the seed germinates good circulation of air and very

little watering will help to prevent this trouble.

Experiments have shown that Snapdragons do better if the fertilizer content in the soil is not very high. This is one of the easiest crops to grow when planted in fresh soil and grown in a well ventilated cool greenhouse. SNAPDRAGON WILT is usually caused by a single, soilborn fungus — *Vorticillium*, which also causes Seidewitz Disease or wilt of *Chrysanthemums*. The only positive prevention for this disease lies in the exclusive use of sterilized soil, from the seed flats to the final potting or benching soil. Do not invite trouble by planning this crop in old 'mum soil unless it is first sterilized.

Super Giant (Non-Resistant)

This is the largest and most fully double Aster class known. The flowers are full petaled, graceful interlacing. Plants about 2½ feet tall, with six to eight long, non-lateral stems per plant.

	Tr. Pkt.	1/4 oz.	Oz.
El Monte —Crimson	\$.40	\$.85	\$3.00
Los Angeles —Shell pink.....	.40	.85	3.00

HASTENING THE FLOWERING OF ASTERS

To secure earliness in blooming of ASTERS out of doors it is necessary to illuminate the seedlings with additional light. Use 25-watt lamps suspended two feet above the bench and have them lighted from 6 P.M. to 10 P.M. for at least five weeks before planting, each lamp to cover sixteen square feet of area. The seed is normally sown in the middle of March and the additional illumination is started after the seedlings have been transplanted. This additional light is continued until the middle of May when the plants are planted out of doors.

The above treatment will increase the earliness of your crop by two to four weeks. The Early Royal Branching, American Branching and Improved Crego varieties will respond very satisfactorily to this treatment.

Begonia

Soil to be used for seed flats should have two parts leaf mold, two parts well rotted manure, two parts soil and one part sand. Steam sterilize the flats and soil about one week before sowing, also water the soil well before sowing. For four inch plants for Spring sale sow seed in August. If 2¼ inch plants are wanted for Memorial Day, sow seeds in December. Many growers make monthly sowings from August to March.

For potting soil use the same mixture as above but add more soil and a three inch pot of Electra or complete fertilizer, to 2½ bushels of soil. Begonia seed will germinate better in a temperature of 60-70° F. Grow Begonias in a 55° temperature.

Mite, Nematode and Aphis are sometimes troublesome.

	Tr. Pkt.	1/64 oz.	1/32 oz.
Adeline —Dwarf bright pink.....	\$1.00	\$2.50	\$4.50

Scandinavia —Free flowering. Bright rose pink.....	1.00	2.75	5.00
Tuberous Rooted —Camelia flowered double type mixed.....	2.50		

Calceolaria

The soil used in germinating the seeds should be made up of two parts leaf mold, two parts well rotted manure, two parts soil, and one part sand. Sterilize the soil and flat with steam to eradicate all disease.

Sow the seeds lightly over the surface and cover the flat with a suitable covering. Calceolaria will germinate better when the temperature is cool, therefore, well shaded locations are better. August sowing will make large plants for May while November sowing will make good four inch plants. Some growers have used the wick irrigation method to germinate the seed with very good results.

Gilbert's Strains

This is an improvement over the original Multiflora Nana type. Compact habit of growth; good selection of colors in the mixture; excellent foliage.

	Tr. Pkt.
Multiflora Nana Red	\$1.00

Candytuft

Candytuft should be sown in flats in January and transplanted when the first leaves appear. Plant in the bench or bed about Feb. 15th. Grow in a temperature of 45-50° and good crop may be secured by Memorial Day. Candytuft Giant Hyacinth Flowered White is the most satisfactory type for this method of culture.

Giant Hyacinth Flowered White—Very superior strain growing 1½ feet high, has immense trusses of bloom. We believe it the finest strain to be had.

Chrysanthemums (Annual)

Another group which is finding favor with florists for cut flower material. Chrysanthemums last remarkably well as a cut flower, but for best results keep them in water 24 hours before marketing. Sow in mid August to follow early Chrysanthemums. Responds very well to additional light.

	Tr. Pkt.	Oz.
Mixed	\$.15	\$.40

Centaurea Cyanus (Cornflower)

Listed below are the finest improved Florist strains of *Centaurea Cyanus*. The flowers are large, fully double and the colors intensified. The extra long stems of this strain make them excellent for cut flower purposes. Responds to additional light. Wilt of *Centaurea Cyanus* may be caused by a single soil born fungus of *Verticillium* which also causes *Seidewitz* disease or wilt of *Chrysanthemums*. The only prevention of this disease lies in the exclusive use of sterilized soil from the seed flats to the finished pot or bench soil. Do not invite trouble by planting this crop in old mum soil unless it is first sterilized.

Cineraria

Positively do not use soil that was previously used for Mums and especially so if your Mums were affected with Verticillium wilt or Seidewitz disease. CINERARIAS are attacked by this wilt which is a soil borne fungus. It will cause the lower leaves to wilt and die and then gradually kill the entire plant. The only prevention for this trouble is to use new field soil from seed flats to finished pot. If you do use old chrysanthemum soil be sure to sterilize it. TO BE ON THE SAFE SIDE IT IS RECOMMENDED TO STEAM STERILIZE SOIL BEFORE USING.

Siter's Rainbow Strain—This Cineraria carries immense flower heads, is compact in growth and has small round leaves. The medium large flowers range in colors from the bright-eyed types to the finer pastel shades.

Originator's Packets: **\$2.00** each

Cremer's Prize Strain—This strain has been greatly improved by the originator—has small foliage that is wilt-proof with tremendous heads of flowers of the brightest colors.

Cyclamen

Dauernheim Strain

This strain is compact, free flowering and matures early. Tests have shown that it is more disease resistant and will do very well under conditions here in the States. The foliage is of medium size, the blooms well proportioned are particularly large, the white and white with eye often measuring six inches across.

Dauernheim's have selected and improved this strain for a number of years and in their trials have found this strain to be superior.

European Strains

We shall also be able to supply seed of the best European Cyclamen Strains as soon as they become available, at market prices.

Delphinium

Vetterle and Reinelt Pacific Strain

WE SUPPLY ONLY THE ORIGINATOR'S STRAIN

This is the finest strain of Delphinium yet introduced. From our personal observations in the field, we find this has unquestionably proven to be the leader in Delphiniums of the better type. The flowers are immense in size, well set on strong, straight stems, do not shatter, and are 60 to 80% mildew resistant.

July or August sowing and transplanting into the field during the fall will produce an early crop with large spikes. Delphinium's require a well drained soil, neutral in reaction. January sowing will produce flowers during the summer.

Black Knight

The individual florets, 2 to 3" in diameter, are **Dark Purple**, beautifully rounded form with heavy velvety texture. Very large well formed spikes.

Blue Bird Series

This series can be recommended as being the **clearest medium blues with white bees**. They carry well formed round flowers 2¼ inches in diameter on very long, graceful spikes.

Bluejay Series

Color striking. **Clear medium to dark blue**. Very intense and alive with contrasting bee.

Cameliard Series

A **pure lavender self**, with **white bee**, individual flowers, are very round and flat. Excellent growing habits.

Galahad Series

Flowers **Clear White**, averaging three inches in diameter, pyramidal spikes, good branching habit, strong whippy stems with a high percentage of mildew resistance.

Guinevere Series

Light Pink Lavender self with **white bee**. Individual florets 2½ to 3 inches in diameter. For cut flowers and show purposes. Mildew resistance—50 to 70%.

King Arthur Series

Brilliant Royal Violet with **large white bee**. Individual florets 2½ inches in diameter. Excellent for cut flowers. Mildew resistance from 80 to 90%.

Lancelot Series (new)

Clear Lilac self with **white bee**.

Percival Series (New)

A companion to the Galahad Series. Large **glistening white** flowers with strongly contrasting **black bee**.

Round Table Series

This represents **all the color combinations of the Knights and their Ladies** which will eventually be introduced. Some three hundred different crosses were used to make up this group.

Summer Skies Series

Clearest Light Blue with **white bee**. Individual florets 2 to 2½ inches in diameter. Ideal for cut flower purposes. Mildew resistance—40 to 60%.

LARKSPUR
Giant Imperial

Larkspur seed may be sown directly in the open in the fall and will flower the following spring. There are two distinctly different methods used and each have a number of successful supporters. The first method is to sow the seed fairly early in the season about August 15th to September 15th. The small Larkspur seedlings will be sufficiently large enough when cold weather sets in to winter over when given a light mulch. The other method employed is to sow the seed in rows in late October or early November so that it will not germinate until early next spring. This crop of Larkspur will generally come in shortly after Delphinium Belladonna.

Gigantea

A remarkable new sweet scented, robust growing extremely large flowered type, ideal for show purposes, florist use and garden decoration. It has also been tested and found good for greenhouse culture.

Mixed75	1.50	2.50

Primula Malacoides "Springtime"

ANOTHER *Gloekner* INTRODUCTION

SPRINGTIME is one of the finest Malacoides ever offered. The color is an attractive SALMON pink which does not fade with age. The flower stems are strong and support a profusion of good sized blooms; and unlike many other varieties of Malacoides, the foliage has good texture and is fairly resistant to rot. Thus the outstanding features of this variety are its pleasing salmon pink color, compact habit of growth and excellent keeping quality.

Seed sown in June will make good flowering plants for January. September sown seed will produce good plants for early Spring; while later sowings can be grown into small plants usable in combinations.

TRADE PACKET — \$2.00

Primula Malacoides Erikssoni

Mrs. Eriksson of Riverside—Rose red.
Glory of Riverside—Rose pink.
Eriksson's New Giant—Rose pink.
Eriksson's White Giant—(New).

See Pages 32-35

Stocks

Stocks are very satisfactory for Winter and Spring flowering. Sowing the seed in August and benching in October, the first flowers may be cut before Christmas if additional light (40-60 watt lamps spaced 5 feet) is used. Without this aid the crop will come into flower in January. Continuity of bloom may be obtained by successive sowings. The non-branching type, which has come into general use, should be planted 3 inches in the row and 6 inches between rows, producing a single stem. The branching types should be planted 8 x 8 inches and topped when 6 inches tall to produce side shoots of sufficient length.

Flowering of stocks only occurs when the temperatures are below 60 degrees for the greater part of the night. To secure the greatest percentage of doubling the largest and most vigorous plants should be selected.

SOWING DATES OF COLUMN OR NON-BRANCHING STOCK FOR VARIOUS BLOOMING DATES

Time of sowing	Flowering
August 1	January
September 1	February
October 1	March
November 1	April
December 1	May
January 1	Mother's Day
February 1	June
February 15	June 15

Non-Branching (Excelsior Column Stocks)

	Tr. Pkt.	1/4 oz.	Oz.

Yellow Wonder — Rich creamy yellow with full double florets well arranged on long spikes	1.00	3.50	12.00

Giants of California (Branching)

The Giants of California can also be grown similarly to the non-branching type. When grown this way the side shoots should be removed. For the retail grower the branching types are gaining popularity. These should be planted 8 x 8 inches and topped when 6 inches tall to produce side shoots of sufficient length.

Parsley

	Oz.	¼ lb.	Lb.
Extra Triple Curled: (Moss Curled) — Plants compact leaves dark and finely cut	\$.20	\$.60	

Onion

	Oz.	¼ lb.	Lb.
Prizetaker: Large, Globular, Yellow. Flesh coarse and mild... \$.75	\$2.50		
White Sweet Spanish: White with clear glistening skin. Globe-shaped75	2.50	
Yellow Sweet Spanish: Globe-shaped, keeps extra well.....	.75	2.50	

Radish

	Oz.	¼ lb.	Lb.
Improved Scarlet Globe: Very early sort, valuable for out of door culture and for forcing. Uniform, rich bright, scarlet, flesh white.....	\$.15	\$.45	\$1.50
Scarlet Turnip, White Tip: Popular variety, small top. Root bright scarlet with white area about the tip15	.40	1.25
White Icicle: The best early white variety. Roots long, tapered, very white throughout.....	.20	.40	1.30

PEPPER
California Wonder

Tomato

	Oz.	1/4 lb.	Lb.
Bonny Best: (73 days)—A general purpose tomato. Fruits evenly colored scarlet-red, medium large.....	\$.60	\$1.80	\$6.00
Break O'Day: (73-75 days) — Early wilt resistant, globe-shaped sort. Fruits large, scarlet of good quality65	2.00	6.50
Chalk's Early Jewel: (75 days) — Very thrifty, heavy producer. Fruits scarlet-red, large and firm.....	.55	1.85	5.00
Dwarf Stone: (82 days)—Strictly dwarf and tree like, require no training. Fruits bright red, medium sized65	2.00	6.50
Earliana: (64-66 days) — Particularly valuable for home garden and early market. Fruit medium size, flattened75	2.50	7.00
Globe "A" (Forcing) — Pink fruits a little larger than regular Globe. Ships well.....1/4 oz.	1.00	3.00	
Globe: (Livingston's) (81 days) — Heavy producer. Fruits purplish pink, large globe shape, scarlet red65	2.00	6.50
Golden Queen: Large yellow fruit, mild flavor70	2.35	7.00
Greater Baltimore: (83 days) — Similar to Stone and particularly valuable for canning.....	.50	1.75	5.50
John Baer: (73 days) — Very similar in every respect to Bonny Best60	1.80	6.00
Marglobe: (75-78 days)—Resistant to Fusarium Wilt. Fruits uniform deep scarlet, globe shape and of distinct quality60	1.80	6.00
Master Marglobe: (75-78 days) — HIGHLY resistant and heavily productive80	2.75	8.00
Michigan State Forcing: Developed at Michigan State College. Very productive under restricted light conditions. Fruits deep scarlet, globe shaped are borne in clusters of five to eleven	1.50		
Oxheart: Heart shaped. Pink fruit, mild flavor ..	1.10	3.70	11.00
Ponderosa: (85 days) — One of the best for home use. Fruits purplish-pink, very fleshy with few seeds of very mild flavor.....	.85	2.75	8.50

	Oz.	1/4 lb.	Lb.
Pritchard: (Scarlet Topper) — Wilt resistant, heavily productive. Fruits large, globular, scarlet and well colored about the stem	\$.65	\$2.20	\$6.50
Rutgers: (78 days) — Highly recommended for second early maturing variety for canning and tomato juice. Fruits similar in shape to Marglobe. Uniformly colored flesh65	2.20	6.50
Stokesdale: (70-73 days) — Early suitable for shipping. Fruits uniform, deep scarlet, globe shape65	2.20	6.50
Stone Improved: (85 days) — Very solid fruit scarlet red, flat shape65	2.20	6.50
Valiant: Early red90	3.00	9.00

The number of days indicates the length of time from date of planting in the open to time of ripening.

TOMATO
Marglobe

FLOWER AND VEGETABLE SEEDS

Electra

Fertilizer 5-10-4

ELECTRA fertilizer is a most unique combination of the old and the new. The good old "organics" upon which the industry was built are supported by newer "organics" of the complete food type, all properly balanced and primed for quick and complete action.

No expense has been spared in producing the best plant food that America has ever known. The careful use of ELECTRA fertilizer will induce

A corrective influence upon soil conditions.

A soil condition in which root production and feeding is encouraged and accelerated.

A proper stand of stem, branch, break and growth development.

An outstanding influence upon bud production and maturity at a proper height.

Full size and deep colored, bright foliage.

Larger flowers and more of them.

FEEDING FORCING FINISHING

It makes plants function properly.
